## SOLCORE/SOLBOARD HT

### Thermally Stable Tooling Materials

*Inexpensive tooling solution for composite fabrication in excess of 700°F (Patent Pending)*

Solcore HT can be cast into complex geometries to form either water removable or inexpensive high temperature tooling ideal for composites processed between 400°F and 1300°F

Solcore HT can be utilized to form high temperature thermoplastics and other high performance polymers in either press or autoclave conditions up to 500psi

Cast NEAR Net and direct machined to either a male or female tool or Available as tooling board
