

# TECFILM

## Thermally Activated Self Pressurizing Film

*Eliminate the need for drafted or multi part tooling Tecfilm puts the pressure where it's needed (Patent Pending)*

TecFilm is a thin flexible material that can be utilized to apply either focused pressure to difficult to press areas or entire surfaces which are processed between 280°F and 1300°F

Pressure in excess of 400psi can be reached for extended duration to ensure perfect consolidation

TecFilm readily consolidates all plastics
